

## ABOUT US

AG Meets began to address the problem and sought to clarify the overall goal of scientific researchers centered in the field of science and innovation to support the exchange of ideas and information, also to encourage coordinated collaborations among researchers, academicians, and scientists in the same field. Use our foundation to improve your skills, share your assessments, suggestions and experiences; establish contacts with your fellow researchers and scientists, and have some increasingly important conversations. We may perform subjective data and information through our meetings for our current and upcoming ages
